

PROGRESS UPDATE

Changes delivered against your testing

What you raised, what was changed, and what it means for candidates and for revenue.

Field	Detail
Product	MyExams365 — institutional CBT examination & preparation platform
Operator	MentraEdge Academy LLP
Document	Progress update against client testing feedback
Date	20 August 2026
Supersedes	Progress Update, 19 August 2026

WHAT CHANGED SINCE THE 19 AUGUST UPDATE

Point 1 has been extended. Discount codes were limited to a single exam; they can now be limited to any combination of exams. The related checkout behaviour was corrected at the same time. Points 2 to 4 are unchanged from the previous update and are restated here so this document stands on its own.

1. Discount codes can be limited to the exams you choose

Before: A code worked on every exam in the portal, so a discount meant for one exam could be used against any of them.

Now: When you create a code you tick the exams it applies to — one, several, or all of them. A code is refused at checkout for any exam you did not tick.

The earlier version of this change allowed one exam only, which covered the straightforward case but not a campaign spanning part of the catalogue. A code for two of four exams previously had to be issued either as two separate codes or as one unrestricted code that also discounted the exams it was not meant for.

- The exam list is a set of tick boxes. Tick as many as apply; untick to remove one; a single control clears the lot back to **all exams**.
- The codes list shows exactly which exams each code covers, so scope is visible without opening anything.
- Leaving every box unticked means the code works across the whole catalogue — the behaviour every code had before scoping existed.
- Codes you created earlier are unaffected and keep working exactly as they do today.

WHERE THE LIMIT IS ENFORCED

Scope is checked on the server when the order is created and priced — not in the browser. A code presented against an exam outside its scope is refused and the full price is charged, whatever the browser was showing. The same check runs when the code is applied in the order summary, so the figure a candidate is quoted and the figure charged at the gateway come from one decision rather than two that could drift apart.

A related correction at checkout

Before: Moving between exams on the checkout page kept a discount that had been applied to the previous exam. The summary could therefore show a discount the payment step would not honour.

Now: Changing exam clears the applied discount and asks for the code to be checked again. The typed code is kept, so re-checking it is a single click.

No candidate was ever charged less than the correct amount — the server priced the order correctly throughout. The fault was that the summary could promise a discount the payment step would then decline, so a candidate could be quoted one figure and billed another.

2. The plans page

- Every plan card now lights up when the mouse moves over it, not only when it is clicked.
- **“Most Popular Choice” is removed.** It is not a claim worth making while starting out, and highlighting one plan pushed the choice before the other two had been read.
- All three plans now look the same. The middle one is no longer enlarged or pre-selected.
- All three buttons read **Select Plan & Checkout**.

3. GST on the plans page

Before: The note at the bottom said prices were **inclusive** of 18% GST, while the plan cards themselves showed “+ GST”. The two contradicted each other.

Now: The cards were right, so the note was corrected. It now says prices exclude GST, that 18% is added at checkout, and that the total is shown before paying.

4. Terms and Privacy pages

- The **Grievance Officer name** is removed from both pages. They were showing the unfilled placeholder “[Grievance Officer Name]” to anyone who read them.
- The registered address is now published in full on both pages.
- The contact email on both is now **support@myexams365.com**.
- The privacy page asked people to write to **privacy@myexams365.com** to withdraw consent. That mailbox does not exist, so those messages would have gone nowhere. It now points to support as well.

WORTH KNOWING

Under the data protection rules the grievance address has to be one that actually receives complaints. Publishing an address that bounces is a compliance problem in itself, which is why all of these now point at a mailbox you read.

Summary of this update

Item	Status
Discount codes limited to chosen exams	Extended — any combination of exams, was one exam only
Discount cleared when the exam changes at checkout	New in this update
Plans page — hover, equal cards, button wording	Delivered, unchanged since 19 August
Plans page — GST wording corrected	Delivered, unchanged since 19 August
Terms and Privacy — contacts and address	Delivered, unchanged since 19 August

This document describes the platform as deployed at the time of writing. Items marked delivered are implemented in the live system.
